support@iwthemes.com IF YOU HAVE QUESTIONS, DOUBTS OR NEED HELP, JUST WRITE US!

General Documentation and how-to guide for setting up and customizing this theme.

Thank you for purchasing one of our themes!

TABLE OF CONTENT

1. Summary, *page 3*
2. General Details, *page 4*
3. ¿How do I edit my new theme?, *page 5*
4. ¿Where are the images?, *page 9*
5. Responsive Issues, *page 10*
6. Credits and thanks, *page 11*

1. Summary

Hello everyone, we thank for have purchased a copy of our theme. Be sure, you're get an excellent support and the entire service has been designed from the ground up to promote ease-of-use and for you be sure our products are 100% original. You should rest assured that if something doesn't go off good, our friendly support team is available to help you whatever you need.

This theme is **100% html5** with Css3 and some files of Javascript. Here, you don't find something about WordPress and neither an installation process. To edit this theme you need to have a bit knowledge about these technologies, all html files are documented in each section or portion of code. It's easy to use and update, anyway if you have doubts just write us to support@iwthemes.com and we're over there to help you and reply asap.

For editing we recommend to use [Sublime Text](#), [Atom](#) or an editor of your preference.

This theme does not have PSD files or graphic design proposal, just you'll see the code and customizing options.

2. General Details

Once you download the package of STUDIO theme from themeforest.net, you will see next:

2 Folders (Default, New version and Help Folder)

Help Folder —> this document

Studio Template—> the one you're seeing in preview link

- 1 html file
- 6 Folders
 - **css:** all css files need to styles of site work correctly, into this folder you'll find more folders with representative name (menu, icons, hover effects..).
 - **js:** all Javascript files, there's a file called **main.js**, it's very important because here there are all functions who make possible the correct functioning of site (tooltips, animations, scrolls) .
 - **images:** The images you see in gray color because we don't have the license of free use but we attach the links of them or you could write us to our support email.
 - **webfonts:** FONT FONTS / FONTAWESOME FREE
 - **sass:** For developers who uses Sass
 - **video:** using in index-video.html

3. ¿ How do I edit my new theme?

After you download the package of STUDIO theme from themeforest.net and founded the folders we talked, you could open with you favorite editor (remember.. brackets, sublime..), look at which one the .html you want to edit and open it, you will find something like this:

Here, we're opening index.html file (it could be a .html file)

```
<!-- Loader -->
<div class="loader">
  <div class="loader__spinner"></div>
  <div class="loader__background"></div>
</div>
<!-- /.Loader -->

<!-- Header -->
<div class="menu-sticked">
  <header>
    <div class="container">
      <div class="row align-items-center">
        <div class="logo">
          
        </div>

        <nav>
          <ul>
            <li><a href="#work">Work</a></li>
            <li><a href="#about">About</a></li>
            <li><a href="#services">Services</a></li>
            <li><a href="#contact">Contact</a></li>
            <li class="d-none d-sm-block">
              <div class="phone">
                <a class="btn btn-primary btn-sm" href="tel:(+57)-1234-444-000" role="button"><span>(+57)-1234-444-000</span></a>
              </div>
            </li>
          </ul>
          <div class="phone d-sm-none d-3">
            <a class="btn btn-primary btn-sm" href="tel:(+57)-1234-444-000" role="button"><span>(+57)-1234-444-000</span></a>
          </div>
        </nav>
      </div>
    </div>
  </header>
</div>
<!-- Header -->

<main>
  <!-- Home -->
  <section class="hero-home">
    <div class="container">
      <div class="row">
        <div class="hero-home__container">
          <div class="hero-home__container-centered d-flex justify-content-center">
            <div class="text-center">
              <h1 class="hero-home__title">We are <span class="hero-home__text-biger d-block text-uppercase">Studis</span></h1>
              <hr class="light-color">
              <p class="hero-home__description">Digital marketing strategies enhance revenue growth by expectancy nearly 3 times</p>
              <a class="btn btn-outline-primary btn-lg mt-4" data-toggle="modal" data-target="#ModalContact" role="button"><span>T
```

STUDIO THEME

Here, there's a general structure of one of .html, you can see the 'head' label where you find metas that need search engines with information about their sites, links to call general styles and the favicon for showing in tab browser. Also, the title you see in tab browser. The 'header' label contents content about logo and menu. All elements you see in top section from website.

Each section of .html files are documented with `<!-- name of portion code -->`. and closes in the same way.

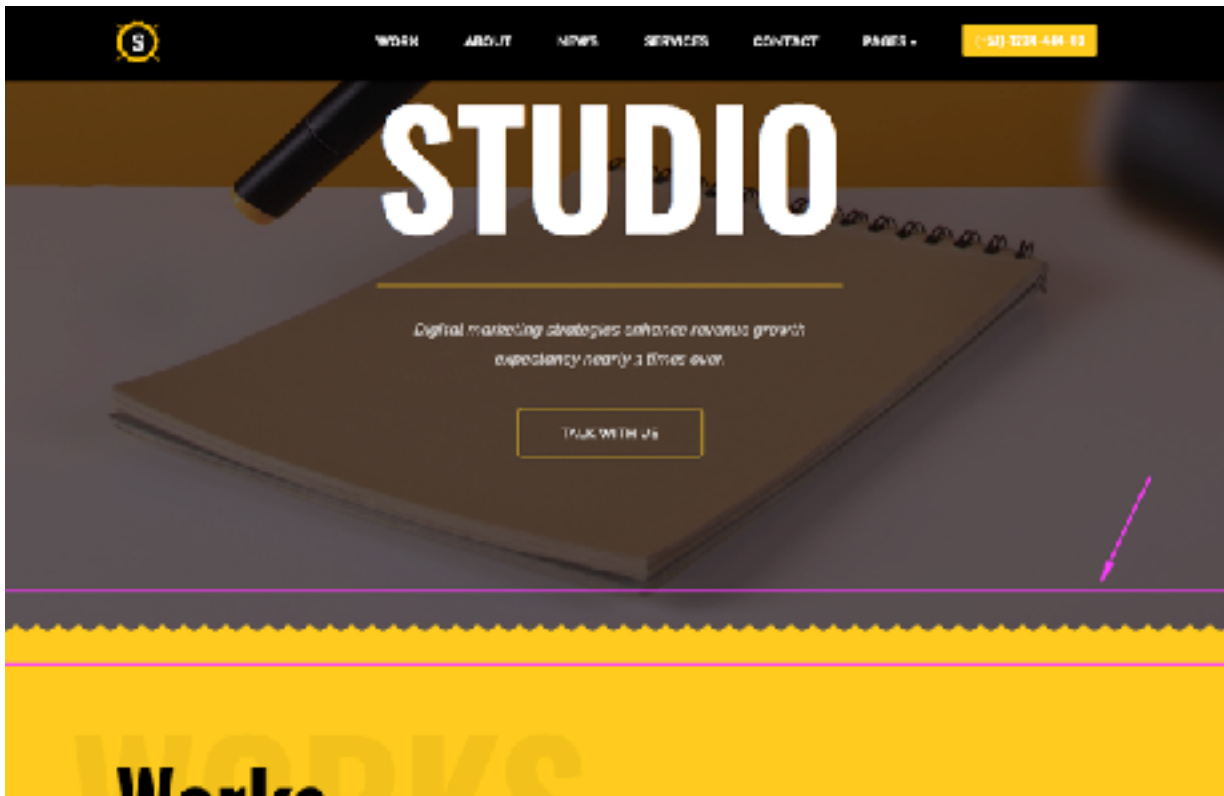

I would like using the VIDEO version,

Sure!, go to index-video.html and paste the URL of your

```
1 <title>Studio One Site Page</title>
2 </head>
3 <body class="data-video">
4
5   <video autoplay="" loop="" muted="">
6     <source src="http://html5demos.com/studio-site-2015/video/video.mp4" type="video/mp4">
7     <source src="http://html5demos.com/studio-site-2015/video/video.webm" type="video/webm">
8     <source src="http://html5demos.com/studio-site-2015/video/video.ogv" type="video/ogg">
9   </video>
10
11   <!-- /.loader -->
12   <div class="loader">
```

index-pattern.html

If you want to use the version with these patterns :

You could use index-pattern.html template or go to body label and add this class (**pattern-divisor-class**):

```
16 <link rel="stylesheet" href="css/main.css">
17 <!-- Main Styles - CSS -->
18
19 <title>Studio One Site Page</title>
20 </head>
21 <body class="pattern-divisor-class">
22
23 <!-- /.loader -->
24 <div class="loader">
25   <div class="loader__spinner"></div>
26   <div class="loader__background"></div>
27 </div>
28 <!-- /.loader -->
29
30 <!-- Header -->
31 <div class="menu-sticked">
32   <header>
33     <div class="container">
```

¿Where are the Javascripts called?

The Javascript files are few. You'll see the links before finish the body label in bottom of each .html.

```
<!-- jQuery first, then Bootstrap JS -->  
<script src="js/jquery-3.3.1.slim.min.js" ></script>  
<script src="js/bootstrap.min.js" ></script>  
<script src="js/slick-carousel/min.js" ></script>  
<script src="js/instagram/instagram.js" ></script>  
<script src="js/main.js" ></script>  
</body>
```

¿What about main.js file?

```
// makes sure the whole site is loaded
$(window).on('load', function() {
    $('body').addClass('body--loaded');
});

//sticked MENU
$(document).ready(function(){
    var c, currentScrollTop = 0,
        navbar = $('.menu-sticked');

    $(window).scroll(function () {
        var a = $(window).scrollTop();
        var b = navbar.height();

        currentScrollTop = a;

        if (c < currentScrollTop && a > b + b) {
            navbar.addClass("scrollUp");
        } else if (c > currentScrollTop && !(a <= b)) {
            navbar.removeClass("scrollUp");
        }

        c = currentScrollTop;
    });
});

//SCROLL
$(document).ready(function(){
    document.querySelectorAll('a[href="#"]').forEach(anchor => {
        anchor.addEventListener('click', function (e) {
            e.preventDefault();
            document.querySelector(this.getAttribute('href')).scrollIntoView({
                behavior: 'smooth'
            });
        });
    });
});

$(document).ready(function(){
    var feed = new Instafeed({
        get: 'user',
        userId: '558761832',
        limit: 6,
        resolution: 'standard_resolution',
        template: '<div class="insta-items" style="background-image:url({{image}})">{{image}}</div>',
        accessToken: '558761832.1677ed0.983b2acc9e964ed83a2d69554483955f',
    });

    feed.run();
});
```

Here the content of main.js, it's very important because here there are all functions who make possible the correct functioning of site (tooltips, animations, scrolls) . You can test

it removing a portion of code and refreshing the browser. Anyway, if you have questions please write us to support@iwthemes.com .

Css file

```
24562     }
24563   }
24564
24565   /* line 16, ../sass/_theme.scss */
24566   .transition, .slider-thumbs .slick-slide.slick-active::after, .s
24567     * > .works--done__item .works--done__item-description .hover-link, .
24568     -webkit-transition: all 300ms ease-in;
24569     -moz-transition: all 300ms ease-in;
24570     -ms-transition: all 300ms ease-in;
24571     transition: all 300ms ease-in;
24572   }
24573
24574   /* line 23, ../sass/_theme.scss */
24575   body {
24576     font-family: "Raleway", sans-serif;
24577     font-size: 1rem;
24578     letter-spacing: .02rem;
24579     color: #000;
24580     line-height: 2rem;
24581   }
24582
24583   /* line 30, ../sass/_theme.scss */
24584   body h1, body h2, body h3, body h4, body h5, body h6 {
24585     font-family: "Dewald", sans-serif;
24586     font-weight: 700;
24587     word-wrap: normal;
24588     word-break: keep-all;
24589     hyphens: none;
24590   }
24591
24592   /* line 38, ../sass/_theme.scss */
24593   body a {
24594     color: #fff;
24595     font-style: italic;
24596     text-decoration: none;
24597   }
24598
24599   /* line 44, ../sass/_theme.scss */
24600   body a:not([href]):not([tabindex]) {
24601     color: #fff;
24602   }
```

Here there's an example how it looks the css code, it's located in [scss/styles.css](#), almost all code of site is starting about 24574 line (where says .body). If you have css knowledge it would be very easy to modify the general styles.

Note. *This theme is working with SASS compilador.*

4. ¿Where are the images?

The images of STUDIO are in gray background because we don't have all licenses of use. We uses [placeholder.com](#) as source. So, here we attach the url of them for using in you personal project:

5. Responsive Issues

This theme is totally responsive, you could see it in your mobile and everything is gonna work good. But we want to clarify when you start to add new information, one part of your responsive will change (or maybe no). Anyway, if you're seeing bugs in responsive details we could help you only if these bugs are related with the proposal of design we offer. Of course, we help you in other issues but it's possible to make some charge.

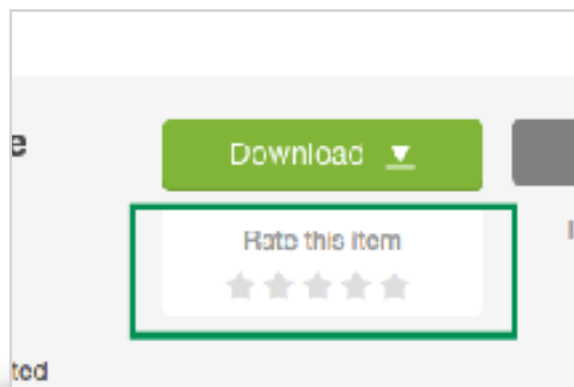

The mobile styles are defined inside each class, for example: In main.css is defined .title-section__dark class and it's followed by its mobile style.

```
/*Section Titles*/
/* line 111, ../sass/main.scss */
.title-section__dark {
  position: relative;
  z-index: 1;
}
/* line 114, ../sass/main.scss */
.title-section__dark h2 {
  color: #008;
  font-size: 6rem;
  text-transform: capitalize;
  position: relative;
  z-index: 1;
}
@media (max-width: 767.98px) {
  /* line 114, ../sass/main.scss */
  .title-section__dark h2 {
    font-size: 5rem;
  }
}
/* line 124, ../sass/main.scss */
.title-section__dark p {
  position: relative;
  z-index: 1;
}
/* line 128, ../sass/main.scss */
```

7. Thanks and Credits

Thanks for purchasing our theme. We hope you like and enjoy it almost as we did it. We invite you to share it in your socials profiles, and give us a vote in themeforest.net site

Go to www.themeforest.net/downloads search and rate our item

We are social!, too. Follow us in:

Youtube and learn how to customize the themes.
