Folder Structure

Within the template you'll find the following folders:

- /dist (production ready HTML/CSS/JS files)
- /src (KIT/SASS/JS source files when using build process)

HTML Structure

This responsive theme built with on Ulkit 3.2 so please refer to original tipo for more info and components use <https://getuikit.com/tipo/introduction>

The template consists of:

- tipo/dist/index.html - Home knowledgebase page
- tipo/dist/article.html - Article page
- tipo/dist/category.html - Category page
- tipo/dist/contact.html - Contact us page with a form

Navigation

Header navigation link are located within the <nav> tag, active page link has “uk-active” class assigned.

```
▼ <body data-gr-c-s-loaded="true" class="js-focus-visible" cz-shortcut-listen="true">
  ▼ <header class="uk-background-primary uk-background-norepeat uk-background-cover uk-background
    via.placeholder.com/1600x400);">
    ▼ <nav class="uk-navbar-container">
      ▼ <div class="uk-container">
        ▼ <div data-uk-navbar class="uk-navbar">
          ▶ <div class="uk-navbar-left">_</div>
          ▶ <div class="uk-navbar-center uk-hidden@m">_</div>
          ▼ <div class="uk-navbar-right">
            ▼ <ul class="uk-navbar-nav uk-visible@m">
              ▶ <li class="uk-active">_</li>
              ▶ <li>_</li>
              ▶ <li>_</li>
              ▶ <li>_</li>
              ▶ <li>_</li>
              ▶ <li>_</li>
            </ul>
            ▶ <a class="uk-navbar-toggle uk-hidden@m" href="#offcanvas" data-uk-toggle>_</a>
          </div>
        </div>
      </div>
    </nav>
```

Footer

Copyright and social icons can be edited inside the <footer> tag:

Social icon link example:

```
<a href="https://www.instagram.com/" data-uk-icon="icon: instagram"
class="uk-icon-link"></a>
```

All available icons are documented here: <https://getuikit.com/tipo/icon>

Contact Form

Template comes with contact form in contact.html file. You can copy paste the form to any page you need. If you need to add form input fields full documentation is located here

<https://getuikit.com/tipo/form>

Awesocomplete Search

Template comes with autocomplete Awesocomplete search included, documentation can be found here <http://leaverou.github.io/awesocomplete/> Awesocomplete and demo search JS is included before closing </body> tag:

```
<!doctype html>
...<html lang="en-gb" dir="ltr" class="gr_html-theme-tipo_now_sh" style> = $0
  ><head>...</head>
  ><body data-gr-c-s-loaded="true" class="js-focus-visible">
    ><header id="header" class="uk-background-primary uk-background-norepeat uk-background-cover
      uk-background-center-center uk-background-fixed uk-background-blend-overlay" style="background
    ><div class="uk-section uk-section-large uk-section-default">...</div>
    ><div class="uk-section uk-section-large uk-section-secondary">...</div>
    ><div class="uk-section uk-section-large uk-section-muted">...</div>
    ><div class="uk-section uk-section-large uk-section-default">...</div>
    ><div>...</div>
    ><div id="offcanvas-categories" data-uk-offcanvas="overlay: true" class="uk-offcanvas">...</div>
    ><div id="offcanvas" data-uk-offcanvas="flip: true; overlay: true" class="uk-offcanvas">...</div>
    ><footer class="uk-section uk-section-muted uk-section-large">...</footer>
    ><script src="js/awesocomplete.js"></script>
  </body>
</html>
```

Javascript source files are located in `tipo/src/js/` folder.

CSS File and Structure

To modify the look and feel of the template, edit the SASS files located in `tipo/src/scss/` folder.

- `tipo/src/scss/main.scss` - Main template styles file that imports partial SASS files

If you would like to edit a specific Uikit component, you can either:

- override SASS variables in `tipo/src/scss/_variables.scss`
- modify/create a custom class in `tipo/src/scss/_mixins.scss`

For the list of all available variables and mixins in Uikit see the following files:

- `node_modules/uikit/src/scss/variables.scss`
- `node_modules/uikit/src/scss/mixins.scss`

Using Build Process

We used CodeKit and Npm for build process <https://codekitapp.com/> <https://www.npmjs.com/>

Run the following npm commands using terminal in root template directory:

- `npm install` (run once to install UIKit and awesomeplete dependencies)

Note: npm must be first installed globally, see npm site <https://www.npmjs.com/>

CodeKit is then used to compile template source files (KIT/SASS/JS) in root folder.

JavaScript

The following scripts are loaded before the body closing tag:

- `tipo/dist/js/awesomeplete.js` - Contains Awesomeplete search script

The following script are loaded head tag:

- `tipo/dist/js/uikit.js` - Contains main UIKit scripts and icons

Detailed UIKit script documentation is located here <https://getuikit.com/tipo/javascript>

Manually Overriding Files

If you decide to manually modify CSS/JS files use /dist folder. If you would like to edit a specific component of the site, simply check the table of contents in the main.css template file, and then scroll down until you find the appropriate style that needs to be edited.

If you would like to edit the primary color of the theme you should do "Replace all" color `#c50000` with the desired one.

Framework

Template uses Ulkit front-end framework version 3.2, documentation is located here:

<https://getuikit.com/tipo/introduction>

Support

Support is only provided through our Themeforest profile form at:

<https://themeforest.net/user/pressapps>
